

VESA® Releases 16 x 9 Wide Notebook Panel Standard

Milpitas, Calif., August 4, 2009 – The Video Electronics Standards Association (VESA) today announced the release of the 16 x 9 Wide Notebook Panel Standard.

This standard defines the requirements for the standardization of mechanical dimensions and selected electrical interface requirements for 13.4-, 14.0-, 15.6-, 17.3- and 18.4-inch W (wide format) 16:9 panels. The intent of this standard is to help LCD manufacturers and panel consumers to better control panel supply and demand cycles, as panels built to these specifications will be able to be used interchangeably without requiring alterations in product tooling or the display module.

The 16 x 9 Notebook Panel Standard can be downloaded free of charge from www.vesa.org.
